

# Nox<sup>for</sup> DoD

## Item-level shipping to the DoD.

Nox is the state-of-the-art for RFID tracking systems and it's now enhanced to integrate with the Department of Defense item tracking system.

Nox is simple:

1. Receive a delivery order from the DoD.
2. Automatically produce item RFID tags.
3. Pack your items in boxes and Nox tracks what items were packed and produces RFID Case tags.
4. Palletize the boxes and Nox automatically counts the boxes and produces an RFID Pallet tag.
5. Ship the items and Nox transmits the item RFID numbers to the DoD for fast, accurate payment.

In addition, Nox records every shipment on video and can replay that video for you and show you every item packed, palletized, or shipped.

▼ Feature	▼ Benefit
VIM-ASAP contract download and shipment upload.	No mistakes in data entry. Every item is counted and accurately transmitted for fast payment.
Fixed RFID Reader Station	Easy, repeatable process for fast and accurate packing and palletizing
Fanless Touchscreen Display, wall mounted	Won't break in your environment or suck up dust causing failure. No keyboard to break or drop. Simple Touchscreen Operation. Wall mount keeps it out of harms way.
Handheld RFID Option	Quick corrective actions and checking or as a backup system
Produces MSL, Unit Pack, and item/case/pallet RFID	One system does it all -- no extra parts or pieces to integrate.
Pre-printed and programmed or on the fly case labels	Whichever way you want to work, we can work with you.
NSN Counts and warns Over, Under	No accidental short or over shipments
NSN Mixed Warning	No accidental mixed case shipments.
Integrated Video records every shipped item	When something goes wrong, every item, NSN, or case can be recalled on video to figure out the moment in time when the error occurred. Just type in the RFID Item # and that video is shown for that item.
Local Nox Data Server	No wasted costs for a remote server to be maintained or the worry of a data line failing in the middle of production.
Remote Updates and Maintenance	No worry about maintaining your server -- we can still remotely fix your server.
XML and CSV Integration	Nox can talk to your existing software so you don't have to do everything twice.
SMS and Email alerts	Nox will warn you about misshipments on your mobile phone.
Web Browser Interface using AJAX	Any PC will work to access Nox from anywhere in the world. We use modern technologies that make things simple.
Up to 500 users per server	Unlimited room to grow at an affordable price.
Transactional database with RAID and SQL Server or MySQL support	Your Data is safe. Even if the power fails, all of the transactions are safe on your server.
Video Integration - Real-time replay or recall of any tag.	Enhance your shipping speed and improve your process with pictures and video of every item ever shipped.
